To Whom It May Concern;

Prairie View Care Center selected the SourceGroup to be its design-build contractor for the facility expansion and renovation we needed to be able to continue serving our community well into the future.

Their team started the process by engaging our staff and executive leadership group through a facility assessment and feasibility study that produced a clear plan that will allow us to provide high quality, cost effective healthcare to our community for another fifty years.

Although we were not able to implement 100% of the master campus improvements that were identified by the feasibility study SourceGroup worked through numerous revisions that ultimately yielded a three phase plan that allowed us to complete our highest priority objectives and properly plan for the phase two and three improvements that will allow us to be competitive and profitable well into the future.

Prairie View Care Center's board was pleased with how SourceGroup balanced working with local contractors or sought out other cost effective quality contractors when necessary to get the project costs in-line with our budget and scheduling requirements. Their ability to renovate our existing space while maintaining all Department of Health ordinances and keeping our facility fully functional was mission critical to making this project a success and they completed the task without incident.

SourceGroup's ability to represent us and effectively manage the development of our project through the numerous State and Department of Health regulatory agencies was invaluable. Their team has a strong work ethic, acts with a high level of professionalism and worked well with our staff and Board alike.

Prairie View Care Center would encourage organizations looking for guidance with facility planning and construction related improvements to partner with SourceGroup.

Sincerely,

Jackie Evers
